RESEARCH EXPERIENCE

Condensed Matter Theory Center, University of Maryland

Apr. 2022 – Present

Advisor: Sankar Das Sarma

- Numerically calculated various properties of quasiperiodic spin chains coupling to a thermal bath at one end, which can be used to estimate the avalanche stability of MBL systems as well as distinguishing different thermalization behaviors.
- Calculated the Lorenz ratio of graphene with a bipolar diffusive Boltzmann transport theory with disorders and phonon scattering, which provides an alternative explanation for the sharp finite-temperature peak of the Lorenz ratio observed in an experimental paper.

Condensed Matter Theory Group, National Tsing Hua University

Jul. 2020 – Aug. 2021

Advisor: Po-Yao Chang

- Developed a generalized version of the gauging procedure, using it to construct non-Abelian fractons, and exploring their algebraic properties.
- Generalized the entanglement entropy to non-Hermitian quantum systems, such that the scaling properties of conformal field theories are retained at critical points.

Quantum Optics Group, National Tsing Hua University

Feb. 2018 – Jun. 2020

Advisor: Ray-Kuang Lee

- Formulated the positive partial transpose criterion in optical phase spaces using symplectic geometry.
